

4x4 pages Products on a Standard Folder

16-pages web presses up to 50 inches web width are equipped with complicated additional devices for 4 pages covers and three side open products in four times production, normally the copies are produced with half web and half output.

SPEFA Folding Systems GmbH, Mainz has added a former modul to the existing program of KOMPAKT folders, which can be easy and without problems as a low cost version integrated in the superstructure of the folder.

The full web width is cutten in the middle and folded lengthwise on the main former and the additional former module and then fed into the folder.

The folder can be run at full press speed so that the output will be 180.000 to 240.000 4-page copies per hour.

These additional facilities are succesfully installed on f.e. **KBA, manroland and HEIDELBERG-GOSS-Web-Offset-Presses.**
