

Flexibility Through Turner Bar Systems

Additional flexibility of the positioning of colour pages i.e. random mixing of coloured ribbons, is provided by a ribbon deck superstructure in front of the former fold.

A Bay Window or Pony turner bars enables complete Turning of the web up to full paper width i.e. to place impressions or coloured panorama pages under the straight strands on the former. Parallel turner bars together lengthwise cutting fixtures, which can cut up to four strands, facilitate the production of narrower, paper-saving copies.

Ribbon decks offer an additional variety of strand Combinations through to special formats with cross folds, such as square formats or narrow products such as the Slim Jim.

SPEFA GmbH, Mainz has developed a modular system for Flexible superstructures, which enables economical individual solutions for existing rotation presses.
